1. Audit Pembersihan, Struktur Workspace Lokal & Path Adaptif C:/D:

Seluruh folder distribusi dan repositori pada direktori kerja lokal ditata menjadi 3 kompartemen bersih agar tidak terjadi duplikasi installer versi lama maupun benturan antara kode GitHub publik dengan arsip pribadi pengguna.

Direktori Workspace	Peran & Isi Utama	Status Sinkronisasi
01_Repo_GitHub_MSSHI/	Working tree bersih GitHub v3.1.0: 63 skill (termasuk muza-skripsi-template), 49 upstreams, 2 Colab notebooks, CLI msshi_cli.py, secret_scan.py, prepare_github_visuals.py, serta docs/pdf-guides/ & docs/manuals/.	Clean tree, siap push main & tag v3.1.0
02_Paket_Siap_Kirim_Klien/	Bundel klien siap pakai: MULAI_SKRIPSI_DRAG_AND_DROP.bat, MULAI_DI_SINI_PEMULA.bat, UPDATE_OTOMATIS_KE_V3.bat, PASANG_LEWAT_POWERSHELL.ps1, PDF panduan, & Notebooks_Skripsi_Colab/.	Diperbarui dari 02_Paket_Distribusi_Klien_Sabtu_Zoom
03_Arsip_Visual_dan_Laporan_PDF/	Menampung Aset_Terstandardisasi_GitHub/, salinan resmi Laporan Eksekusi PDF, plus menjaga utuh Arsip_Pribadi_MuZA_Jangan_Dihapus, Proyek_Aktif_Nov_2026, & Sandbox_Eksperimen.	Diperbarui dari 03_Aset_Visual_dan_Dokumen_MuZA

Deteksi Penyimpanan Adaptif (Anti Error Hardcoded D:\)

Skrip *msshi_skripsi_drop.py* dan peluncur *MULAI_SKRIPSI_DRAG_AND_DROP.bat* memeriksa Drive D:\ secara dinamis: bila Drive D:\ tersedia dan dapat ditulis, data dan pustaka ringan (*skripsi-pylibs*) diarahkan ke **D:\HermesData\Skripsi_Output**; bila perangkat klien hanya memiliki Drive C:\, sistem otomatis fallback ke **%USERPROFILE%\HermesData** dan **%USERPROFILE%\Documents\MuZA_Skripsi_Output**.

2. Katalog Visual Terkurasi & Standardisasi Kanvas Pillow

Sebanyak **19 aset gambar** diseleksi secara visual dari tiga koleksi sumber lokal (Arsip Karakter Hermes AI, Koleksi Meme Reaction, dan Arsip PP TIKTOK) sambil membuang seluruh foto pribadi kamera, undangan, maupun cuplikan non-relevan. Setiap gambar dirender ulang memakai *scripts/prepare_github_visuals.py* ke dalam 4 kanvas seragam.
